

RoHS Compliant Product
A suffix of "-C" specifies halogen and lead-free

DESCRIPTION

KS05V4 is designed to protect I/Os being sensitive concerning capacitive load, such as USB2.0, Ethernet, DVI etc. from destruction by ElectroStatic Discharges (ESD).

Therefore, KS05V4 incorporates four pairs of ultra-low capacity rail-to-rail diodes plus an additional Zener diode to provide protection to downstream signal and supply components from Electrostatic Discharge (ESD) voltages. Due to the rail-to-rail diodes being connected to the Zener diode, the protection is working independent from the availability of a supply voltage.

KS05V4 is fabricated using thin film-on-silicon technology and integrates 4 ultra-low capacity rail-to-rail ESD protection diodes in a miniature TSOP-6 package

Applications Information

Universal Serial Bus 2.0 Protection

KS05V4 is optimized to protect e.g. two USB 2.0 ports of Electro-Static-Discharge (ESD). Each device is capable of protection both USB data lines and the VBUS supply. A typical application is shown in the schematic below.
